DETAILED ACTION

1. Applicant's election of invention I (claims 1, 3, 5-9, 11, 13-17, 19, 21-24 and 35-37) in the reply filed on May 27, 2009 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Claim 40 is newly added. Claims 1, 3, 5-9, 11, 13-17, 19, 21-24, 35-37 and 40 are pending.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 3, 5-9, 11, 13-17, 19, 21-24, 35-37 and 40 rejected under 35 U.S.C. 102(e) as being anticipated by Jonsson et al. (U.S. Patent Number 7,164,885) hereinafter referred as Jonsson.

As to claim 1 Jonsson teaches a method for invalidating a resource record in a local cache at a client computer system within a network, comprising:

- retrieving the resource record from the local cache at the client;
- issuing one or more queries for the resource record;

waiting for a response to the query; and
if the response to the query is not received in a pre-determined amount of time and after issuing a predetermined number of queries for the resource record, invalidating the resource record at the client (Column 7, lines 23-65, Column 8, lines 15-Column 9, lines 8).

As to claim 3, Jonsson teaches the method of claim 1, further comprising:
receiving a multicast message from a second client querying a second device;
locating a second resource record associated with the second device;
waiting for a multicast response to the multicast query; and
if after a pre-determined number of queries the multicast response to the multicast query is not received in the pre-determined amount of time, invalidating the second resource record (Column 7, lines 23-65, Column 8, lines 15-Column 9, lines 8).

As to claim 5, Jonsson teaches the method of claim 1, wherein if the response to the query is not received in a pre-determined amount of time, the method further comprises:

retrieving a parent record of the resource record at the client, wherein the parent record refers to the resource record;
issuing a query for the parent record;
waiting for a response to the query from the device; and
if the response to the query is not received in a pre-determined amount of time, invalidating the parent record, and then repeating the above process by

applying it recursively to any records that refer to the now-invalidated parent record (Column 7, lines 23-65).

As to claim 6, Jonsson teaches the method of claim 1, wherein if the response to the query is not received in a pre-determined amount of time, the method further comprises:

retrieving a parent record of the resource record at the client, wherein the parent record refers to the resource record;

issuing a query for the parent record;

receiving a response to the query from the device, wherein the response includes information for updating the resource record; and

updating the resource record with the information received in the response (Column 7, lines 23-65).

As to claim 7, Jonsson teaches the method of claim 6, wherein the method further comprises updating the parent record with the information received in the response (Column 7, lines 23-65).

As to claim 8, Jonsson teaches the method of claim 1, wherein the method is invoked at a pre-specified time interval (Column 7, lines 23-65).

Claims 9, 11, 13-17, 19, 21-24, 35-37 and 40 do not teach or define any new limitations other than above claims 1, 3 and 5-8. Therefore, 9, 11, 13-17, 19, 21-24, 35-37 and 40 are rejected for similar reasons.

Examiner's Note: Examiner has cited particular columns and line numbers in the references as applied to the claims above for the convenience of

the applicant. Although the specified citations are representative of the teachings of the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant in preparing responses, to fully consider the references in its entirety as potentially teaching of all or part of the claimed invention, as well as the context.

Response to Arguments

3. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.
